Technical data

- Product dimensions: 130x36x17mm
- Power cable: 40cm
- Power consumption: 3W
- LED quantity: 6pcs
- Working voltage: 12/24V
- Approvals, certificates:
  ECE R10, ECE R65, IP65
- Material of execution:
  Housing: AL.
  Lens: PC

Functions

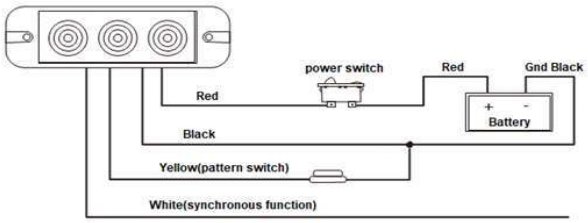

- Warning beacon, for automotive use only
- The lamp has R10 approval - electromagnetic compatibility and R65 approval - authorizing it to be used on public roads
- The lamp is intended for vehicles with 12/24V installation
- Quantity of flashes: 2 modes
- Light color: amber
- Reverse polarity protection

MODES	DESCRIPTION
1	Single flash
2	Double flash

Mounting method, connection lamp

- Mounting the lamp with screws to the vehicle structure
- Installation only in specialized workshops or professional service
- Lamps must be installed only in accordance with the UNECE regulations
- Connection of the lamp with the instalation of the vehicle, the connection must be isolated with the heat shrink tube, it is neccessary to avoid ingress of water to the core of the wires, which can cause the damage to the electrican and electronical components of the lamp

WIRE MARKING	
COLOR	FUNCTION
Red	power +
Black	ground -
Yellow	change pattern
White	synchronize

1. Connect all red wires together
2. Connect all czarne wires together
3. To synchronize the lamps, connect all white wires together
4. Connect the red and black wires to power and ground
5. The yellow cable from the first lamp connected to the power supply from the vehicle is responsible for changing the type of flashes
6. Changing the type of flashes takes place after a short connection of the yellow and black wires through the mode switch

The connection between the lamp and vehicle's installation should be isolated with heat-shrink tube, to avoid getting water and moisture to the copper wire of the lamp, which can damage electronic components and flood the lamp with water.
